

Showcasing more advanced recipes developments

Yanchun He (NERSC)

31th May, 2023

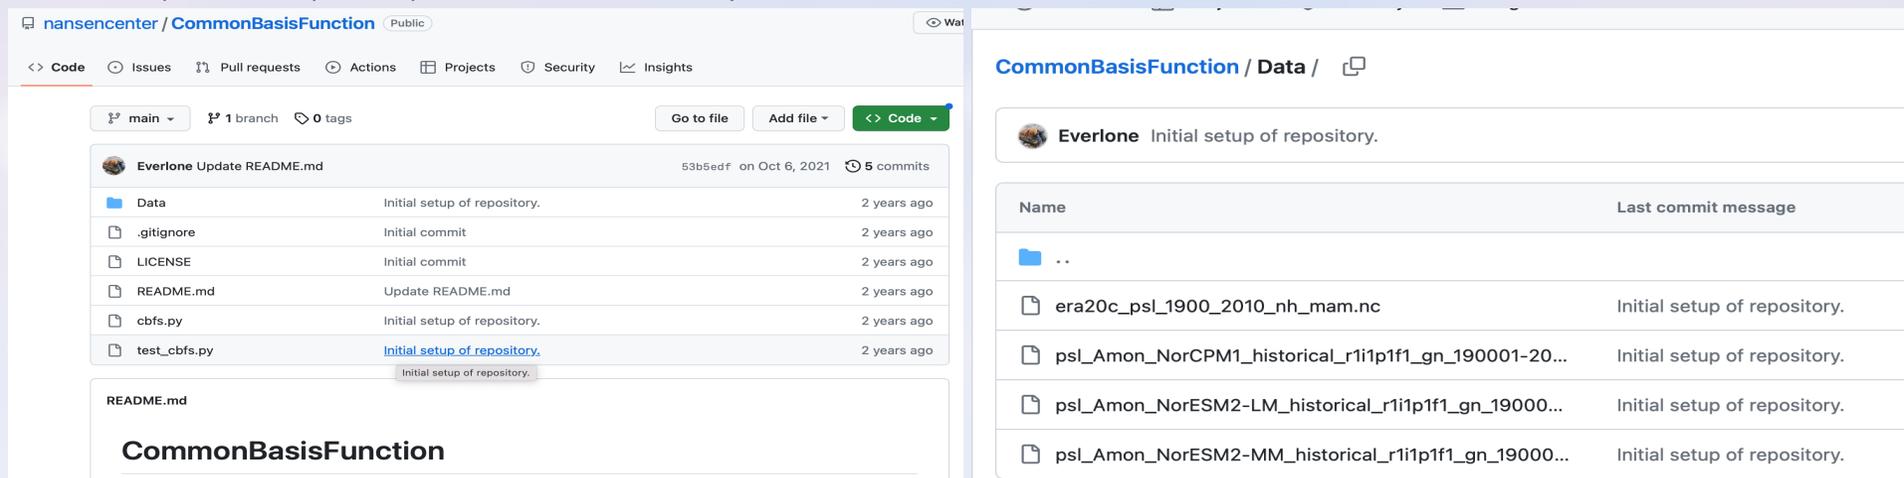

Outline

- Convert an existing python diagnostic program as a ESMValTool recipe and scripts.
- "CMORize" an observational data in a simplified way
- Save data and plots provenance record

Convert an python diagnostic program to ESMValTool recipe and scripts

What to get started:

- A python source code and observation and model dataset, available at the [NERSC github repository](https://github.com/nansencenter/CommonBasisFunction) to calculate the Common Basis Function (Lee et al., 2018) of CMIP model output.

The screenshot shows the GitHub repository for `nansencenter/CommonBasisFunction`. The repository is public and has 1 branch (main) and 0 tags. The commit history shows 5 commits by Everlone, with the most recent commit on Oct 6, 2021. The file structure includes `Data`, `.gitignore`, `LICENSE`, `README.md`, `cbfs.py`, and `test_cbfs.py`. The `README.md` file is visible, showing the repository name `CommonBasisFunction`. The `Data` directory is expanded, showing a list of files with their last commit messages, all of which are "Initial setup of repository."

Name	Last commit message
..	
era20c_psl_1900_2010_nh_mam.nc	Initial setup of repository.
psl_Amon_NorCPM1_historical_r1i1p1f1_gn_190001-20...	Initial setup of repository.
psl_Amon_NorESM2-LM_historical_r1i1p1f1_gn_19000...	Initial setup of repository.
psl_Amon_NorESM2-MM_historical_r1i1p1f1_gn_19000...	Initial setup of repository.

There are mainly two python program files:

1. `cbfs.py`: to calculate the EOF observational data and CBFs of the model data
 - Let's have a look at it: <https://github.com/nansencenter/CommonBasisFunction/blob/main/cbfs.py>
2. `test_cbfs.py`: to load data files, import the `cbfs.py` module to do the calculation, and then plot the results
 - Read how it works: https://github.com/nansencenter/CommonBasisFunction/blob/main/test_cbfs.py

Why we do the transform of stand-alone script to ESMValTool recipe?

Stand-alone script	ESMVALTool recipe + scripts
simple	complicated
hard-coded	flexible recipe + unchanged scripts
difficult to extend	flexible to extend
no data provenance	good provenance record

Convert an python diagnostic program to ESMValTool recipe and scripts

What we will do:

- try to keep the main program `cbfs.py` as a module to import the diagnostic script
- Convert the `test_cbfs.py` into an ESMValTool recipe + diagnostic script
 - the recipe: collect the observation model data, do preprocessing
 - https://github.com/NordicESMhub/ESMValTool-recipes/blob/main/recipes/recipe_cbf.yml
 - the diagnostic script: loop through all data, plotting, saving
 - https://github.com/NordicESMhub/ESMValTool-recipes/blob/main/diag_scripts/cbf/diag_cbfs.py

- add cmorizier script, e.g., `formatters/datasets/era-20c.py`

```
$ yanchun@ipcc:~/diagnostics/esmvaltool
$ git status
Not currently on any branch.
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   esmvaltool/cmorizers/data/datasets.yml

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    esmvaltool/cmorizers/data/cmor_config/ERA-20C.yml
    esmvaltool/cmorizers/data/download_scripts/download_era_20c.py
    esmvaltool/cmorizers/data/formatters/datasets/era-20c.py
```

</div> <div>

A quick hack approach

Use NCO/CDO to format the manually downloaded observational data

An example: https://github.com/NordicESMhub/ESMValTool-recipes/blob/main/cmorizers/cmorize_era20c.sh

```
#!/bin/env bash
# Script to make the observation data ERA-20C CF-compliant
# ERA-20C:
# https://climatedataguide.ucar.edu/climate-data/era-20c-ecmwf-atmospheric-reanalysis-20th-century-and-comparisons-noaa-20cr
# CF convention:
# http://cfconventions.org/Data/cf-standard-names/current/build/cf-standard-name-table.html
# and search in the Standard Names "air_pressure_at_mean_sea_level"
#
# Yanchun He, 22nd May, 2023

# copy rawobs
mkdir -p ../Data/rawobs/ && cd ../Data/rawobs/
wget http://hs9560k.web.sigma2.no/diagnostics/esmvaltool/yanchun/Data/rawobs/psl_mon_1900_2010.nc
cp psl_mon_1900_2010.nc ../Data/ESGF/obsdata/Tier3/ERA-20C/
```

```

float longitude(longitude) ;
    longitude:units = "degrees_east" ;
    longitude:long_name = "longitude" ;
float latitude(latitude) ;
    latitude:units = "degrees_north" ;
    latitude:long_name = "latitude" ;
int time(time) ;
    time:units = "hours since 1900-01-01 00:00:00.0" ;
    time:long_name = "time" ;
    time:calendar = "gregorian" ;
short sp(time, latitude, longitude) ;
    sp:_FillValue = -32767. ;
    sp:missing_value = -32767s ;
    sp:units = "Pa" ;
    sp:long_name = "Surface pressure" ;
    sp:standard_name = "surface_air_pressure" ;
    sp:add_offset = 78126.8359375 ;
    sp:scale_factor = -0.807185921572667 ;

```

The rawobs is available at: http://ns9560k.web.sigma2.no/diagnostics/esmvaltool/yanchun/Data/rawobs/psl_mon_1900_2010.nc

</div> <div>

```

yanchun@ipcc:/projects/NS9560K-dataLake/ESGF/obsdata/Tier3/ERA-20C
$ ncdump -h OBS6_ERA-20C_reanaly_1_Amon_psl_190001-201012.nc
netcdf OBS6_ERA-20C_reanaly_1_Amon_psl_190001-201012 {
dimensions:
    lon = 360 ;
    lat = 181 ;
    time = UNLIMITED ; // (1332 currently)
variables:
    float lon(lon) ;
        lon:units = "degrees_east" ;
        lon:long_name = "longitude" ;
    float lat(lat) ;
        lat:units = "degrees_north" ;
        lat:long_name = "latitude" ;
    int time(time) ;
        time:units = "hours since 1900-01-01 00:00:00.0" ;
        time:long_name = "time" ;
        time:calendar = "gregorian" ;
    short psl(time, lat, lon) ;

```

In the ESMValTool recipe

```
variables:  
  psl:  
    short_name: psl  
    mip: Amon  
    preprocessor: prepare_map  
    reference_dataset: ERA-20C  
    start_year: 1950  
    end_year: 2010  
  additional_datasets:  
    - {dataset: ERA-20C, project: OBS6, type: reanaly, version: 1, tier: 3}
```

Add data provenance record

For example, under the `rund_dir` of this output of `recipe_python`,

http://ns9560k.web.sigma2.no/diagnostics/esmvaltool/yanchun/tmp/recipe_python_20230528_173700/run/map/script1/diagnostic_provenance.yml

```
? /projects/NS9560K/www/diagnostics/esmvaltool/yanchun/tmp/recipe_python_20230528_173700/plots/map/script1/png/CMIP5_bcc-csm1-1_Amon_historical_r1i1p1_tas_2000-P1M.png
: ancestors:
  - /projects/NS9560K/www/diagnostics/esmvaltool/yanchun/tmp/recipe_python_20230528_173700/preproc/map/tas/CMIP5_bcc-csm1-1_Amon_historical_r1i1p1_tas_2000-P1M.nc
  authors:
    - andela_bouwe
    - righi_mattia
  caption: 'Global map of Near-Surface Air Temperature in January 2000 according to
    bcc-csm1-1.'
  domains:
    - global
  plot_types:
    - zonal
  references:
    - acknow_project
  statistics:
    - mean
? /projects/NS9560K/www/diagnostics/esmvaltool/yanchun/tmp/recipe_python_20230528_173700/plots/map/script1/png/CMIP6_BCC-ESM1_Amon_historical_r1i1p1f1_tas_gn_2000-P1M.png
: ancestors:
  - /projects/NS9560K/www/diagnostics/esmvaltool/yanchun/tmp/recipe_python_20230528_173700/preproc/map/tas/CMIP6_BCC-ESM1_Amon_historical_r1i1p1f1_tas_gn_2000-P1M.nc
  authors:
    - andela_bouwe
    - righi_mattia
  caption: 'Global map of Near-Surface Air Temperature in January 2000 according to
    BCC-ESM1.'
  domains:
    - global
  plot_types:
    - zonal
  references:
    - acknow_project
  statistics:
    - mean
```

How to make the provenance record

```
def get_provenance_record(attributes, ancestor_files):
    """Create a provenance record describing the diagnostic data and plot."""
    caption = ("Average {long_name} between {start_year} and {end_year} "
              "according to {dataset}.".format(**attributes))

    record = {
        'caption': caption,
        'statistics': ['mean'],
        'domains': ['global'],
        'plot_types': ['zonal'],
        'authors': [
            'unmaintained'
        ],
        'references': [
            'NICEST-2',
        ],
        'ancestors': ancestor_files,
    }
    return record
```

in the `main(cfg)`

```
datasets = select_metadata(input_data, short_name='psl', activity='CMIP')
for dataset in datasets:
    basename = 'cbf_' + Path(dataset['filename']).stem
    provenance_record = get_provenance_record(
        dataset, ancestor_files=[dataset['filename']])

save_data(basename, provenance_record, cfg, cbf)
```

or replace ESMValTool's `save_data` explicitly with:

```
from esmvaltool.diag_scripts.shared import ProvenanceLogger
...
ESMValToolWithProvenanceLogger(2023) as provenance_logger:
    provenance_logger.log(filename, provenance_record)
```
